WASHER
SELLS FOR**

\$119⁵⁰

East of Rockies

The gasoline engine for the Speed Queen Washer is built by the same company that builds the famous Johnson "Sea Horse" outboard marine motor.

When you consider the extremely adverse conditions under which an outboard motor must operate—rain or sunshine, hot weather or cold—it is easy to understand why the Johnson Motor Company is qualified to build a gasoline engine for a washing machine of utmost dependability.

The **SPEED QUEEN**

Aluminum Washer

is available with the famous

"JOHNSON" MOTOR

POWER—Rated at ½ horsepower. Ample for any washing load.

SPEED—1750 R.P.M.

TYPE—Johnson Utilimotor 2 cycle, single cylinder, air-cooled 2" bore, 1½" stroke.

IGNITION—Built-in flywheel magneto. Standard motorcycle size plug and now used by many makes of automobiles. Easy to get at.

LUBRICATION—Automatic and positive. Cannot "pump oil." Oil mixed with gasoline. Splash lubrication as used on outboard motors. No oil change necessary.

CARBURETOR—Specially designed Vacturi carburetor, preventing unvaporized fuel from entering crankcase. Perfect carburization resulting in great fuel economy and high power.

COOLING—By strong air current from flywheel blowers. Extra large cooling fins on cylinder.

GOVERNOR—Centrifugal flywheel type—no adjustment necessary. Set to run at the proper speed.

STARTING—Conveniently located foot starter. A few "pumps" with the foot starts the motor. Automatic choke.

PORTABILITY—Motor easily removed from washer and used for other purposes. Pulleys to operate from either side of motor.

CRANKSHAFT—Drop forging, case hardened. Heavy counter-balances reduce vibration. Smooth and quiet in operation.

FUEL CAPACITY—Three pints in base—two hours' supply.

EXHAUST—Through a 10-foot cable which can be extended through window. No exhaust odors. Thoroughly muffles exhaust.

WEIGHT OF MOTOR—37 lbs.

The ease of starting, the quietness and smoothness of operation, the absence of exhaust fumes and the even flow of power make this Johnson Utilimotor practically as convenient and efficient as an electric motor. The exhaust cable carries the burnt gases outside and muffles the exhaust. The new foot-starter lever makes starting a simple and easy matter.

G U A R A N T E E

The Johnson Utilimotor furnished in the "Speed Queen" Washer is guaranteed against defects in material and workmanship. If any part or parts prove defective, we will replace them free of charge.

The "Speed Queen" with the gasoline engine is identically the same washer as the "Speed Queen" equipped with the electric motor. Any "Speed Queen" Gas Engine Washer can easily be converted into an Electric Washer by merely removing the engine and installing an electric motor.

Everything You Could Want in a FARM WASHER

for Only

\$119⁵⁰

EAST OF
ROCKIES

ALL you need do to satisfy yourself that the Speed Queen is your wisest choice—is to wash with it.

You will marvel how wonderfully clean it washes . . . how it eliminates handrubbing of badly soiled work clothes . . . how smoothly and quietly it runs . . . how easy the balloon rolls are on buttons . . . how quickly the "Johnson" gasoline engine starts . . . and how simple it is to operate.

No wonder the Speed Queen has won such popularity on the farm! It gives you everything you could possibly want in a washer—for only \$119.50. Besides, it is backed by the strongest written guarantee in the industry. Electric model sells for \$99.50.

In fairness to your wash day happiness and to your pocketbook, mail the coupon below for free printed literature and the name of your nearest Speed Queen dealer.

The Motor of a Hundred Uses

½ Horse Power . . . Weight, 40 lbs.
Hand Starter More Power
Pound for Pound Than Any Other
Gasoline Motor of Equal Rating . . .

**Portable!
No Vibration!**

THIS powerful little motor weighs but 40 pounds and therefore adds very little in weight to any piece of motor driven machinery. It is actually not too heavy for any woman to handle. *Valveless*; every stroke is a power stroke. Very little vibration because of the consequent elimination of dead spots and unnecessary moving parts. The only moving parts are the piston, connecting rod, crankshaft and magneto. Can be quickly stopped by a convenient stop button. Simple governor maintains constant speed. *No carburetor adjustment* is ever necessary. Lubricate by mixing ½ pint good lubricating oil with each gallon of gas.

EFFICIENCY . . . COMPACTNESS

Here is instant power at the pull of a handle—*cheap power* that is dependable on any occasion and for any purpose. The Johnson ½ H.P. Utilimotor is the lowest-priced power unit of that capacity ever made. *It has no superior for efficiency and compactness.* Delivers more power, pound for pound, than any other gasoline motor of equal rating. Hundreds of thousands of this type of motor in use all over the world prove it to be by far the most satisfactory of all fractional horse-power motors. *Shipped not prepaid from factory in NORTHERN ILLINOIS.*

99BM8850½—Johnson Utilimotor \$29.50

Time payment price—\$7.00 down and \$5.00 a month \$32.45

Can be furnished with Foot Starter if desired. Hand Starter will be shipped unless otherwise stated.
